

SAME SEX COUPLE INTERDONATION PRICE LIST

This price list is for people in a same sex relationship where one partner wishes to donate to the other. All cycle costs are package costs and include clinical support **during** a treatment cycle (ultrasound scans, theatre charges, anaesthetic charges, doctor's fees and post-op recovery where applicable). The donation package includes the cost of the donor's medications, ultrasound scans, stimulation bloods and egg collection. Fresh egg donation cycles which do not succeed in a clinical pregnancy are entitled to a free follow-up, if booked within 6 weeks of the pregnancy test. At the donor's egg collection, if there are no eggs or failed fertilisation, or if no embryo transfer takes place, we regret no refund can be issued. **Pregnancy and contrast scans (saline scans) are charged separately. Blood tests and medications are charged separately and can vary from patient to patient.**
